

Data Centers – The Digital Power

Drive to the Net Zero Carbon Data Centers

Life Is On

Schneider
Electric

2023 Long-term Load Forecasting Workshop
Denver June 14, 2023

A grayscale background image showing a hand with the index finger touching a smartphone screen. The word "DIGITAL" is overlaid in large, bold, green capital letters.

DIGITAL

By 2025

90%

of Fortune 500 companies will become digital providers, both selling and consuming digital services

Source: Equinix

A market going to keep hitting records high

5% CAGR new build growth (CAPEX)

Led by Europe & China

Internet Giants (and North America) remaining the technology epicenter (~40% of global market)

US Data Center demand is forecasted to grow 10% per year

35GW by 2030, up from 17GW in 2022

Data center power consumption, by providers/enterprises,¹ gigawatts

Data center power consumption, by providers/enterprises,¹ % share

Source: <https://www.mckinsey.com/industries/technology-media-and-telecommunications/our-insights/investing-in-the-rising-data-center-economy>

Large Data Centers getting bigger and bigger

and Edge Data Centers will exceed the power consumption in the next decade

#	Location	Data Centers	Megawatts
1	Northern Virginia	275	2,600
2	Dallas	150	650
3	Northern California (Silicon Valley)	160	625
4	Phoenix	90	600
5	Chicago	105	550
6	Atlanta	75	375
7	Portland (including Hillsboro)	40	355
8	New York & New Jersey	140	295
9	Seattle (including Quincy)	75	290
10	Los Angeles	65	210
Total	—	1,175	6,550

Data Center Pressures: Climate targets, Climate realities

GHG emission reductions

6.21% increase in 2021 U.S. greenhouse gas emissions putting the U.S. further off track from achieving climate targets

Rhodium Group

32 business reporting quarters remaining to cut carbon emissions in half to keep global warming below pre-industrial levels

UN IPCC

Resilience

\$148 Billion the five-year average cost of billion-dollar-plus natural disasters

NOAA

6,681 extreme weather events over the past two decades (2000-2019)

UN Office for Disaster Risk Reduction

Reliability

1.33 billion outage hours across the U.S. in 2020

PowerOutage.US

\$5,500/minute average cost of downtime

S&C State of Commercial & Industrial Power Reliability Report

Cost-stability

65% increase in U.S. electricity prices in the last 20 years

EIA

79% increase in U.S. natural gas prices in the last 20 years

Bureau of Labor Statistics

Three key priorities for the data center industry to achieve a net-zero future

A grayscale photograph of a person wearing a hard hat and safety vest, walking away from the camera on a dirt path towards a large wind turbine. The path is flanked by grassy fields, and several other wind turbines are visible in the distance under a hazy sky.

CONVERGED ENERGY

We are building a future where the words Genset, UPS and Microgrid are not distinct but converged, with the aim to achieve net zero

Sustainable energy resiliency for multi-sourced critical systems

From *legacy “top down”
power distribution*

To new *Adaptive Energy Spine (AES)*

Adaptive Energy Spine, a software-defined energy connection system

A system that can integrate and adapt to different storage tech and use cases

Customer-driven choice

Industry can focus on value delivery not implementation

Industry architecture:

Standard physical, electrical, and control interfaces

High variability based on maturity, geography, risk, etc.

Suppliers differentiate on implementation

A “Container” inclusive of:

- Switchgear
- Protection
- Power conversion
- Control with APIs
- Monitoring & sensors

Holistic energy management that harmonizes with the grid

Schneider Electric's version for advisory and orchestration

DRIVERS

24/7 time matching of
CO₂ intensity regulation

Multiple off-site/on-site DERs to
harmonize and orchestrate

TCO reduction and
prosumer considerations

VIRTUAL MICROGRID

Efficiency of hydrogen production?

Key Takeaways

1

Data Center Capacity will continue to grow, both for Hyperscale and Edge applications.

2

Data Centers are looking for ways to become more autonomous from Utility companies (Prosumer).

3

24x7 Sustainable energy matching will be the holy grail (efforts are already under way).

A grayscale photograph of a hand hovering over a glowing digital interface, possibly a tablet or a futuristic control panel. The hand is positioned on the left side of the frame, with fingers slightly curled. The interface below it is dark with bright, glowing lines and shapes, suggesting a high-tech or digital environment. The background is dark and out of focus.
